

Queen City Academy of Certified Hazardous Materials Managers

MEETING:

Chapter Meeting

PLACE AND TIME:

Johnson and Wales Student Dining Hall

Tuesday, February 7, 2006

Dinner at 6:00 PM

WELCOME AND CALL TO ORDER

Annie Richardson called the meeting to order at approximately 7:00 pm.

MEETING DISCUSSIONS

All of the visitors, new members, and board members were introduced to the attendees.

The chapter is going to start having a member discuss a “Chapter Member Highlight” at each meeting. This person will make a short presentation at the meeting and the information will be shared on the website. Christina Field provided the first presentation which centered on the problems associated with renting all or part of a building that contains asbestos.

Christina reminded everyone of their 2006 dues and explained an incentive to recruit new members. If you get someone to join the chapter, your dues will be paid for by the chapter.

There was a discussion concerning the web site not winning the award at the 2005 conference. The website will be re-submitted in 2006.

Minutes from the November 2005 meeting were read and approved.

Annie reviewed the 2006 Chapter Operational Plan and Chapter Initiatives.

There was discussion concerning speakers for upcoming meetings. It was suggested that the poll taken in 2005 identifying areas of interest be used as an idea base. Margot suggested a tour of the Westinghouse facility in Columbia. It was decided that a schedule would be developed for this year and the start of 2007.

Annie reported that the board is continuing to work on corporate sponsorships and that the 2005 Annual Report was submitted to the Academy in January. She also reported that a one hundred dollar donation was made to the church that is allowing us to use their parking lot.

Members were in agreement that Johnson and Wales is a good location and we should continue to utilize the location if a meeting room that has doors can be reserved.

Alex Almaguer of Duke Power Catawba Nuclear Station gave an informative and interesting presentation on the proposed OSHA Hexavalent Chromium Standard.

The meeting was adjourned at approximately 8:00 PM.
